Always Improving

Sureflow technology has been developed in Fosroc's laboratories with the specific aim of controlling water addition and improving product performance

Low air voids and maximum contact with baseplate is the key to successful and durable grouting. Using Conbextra Sureflow 100 ensures smooth flow, and extended workability times mean that it is easy to get full contact.

Less water and improved shrinkage compensation ensures that Conbextra Sureflow 100 will not shrink, continuing to provide strong support for many years.

High early strengths make it easier to remove formwork and apply partial loads sooner.

- Workability
- Material Stability
- Shrinkage Compensation

Not only is Conbextra Sureflow100 a technically advanced product, it is more user friendly than ever. It has excellent workability retention and flows in a smooth and consistent manner, meaning you can grout for longer periods of time with fewer voids. Greater tolerance to water addition, higher early strengths and ease of mixing and workability mean that grouting is trouble free.

Technical Performance

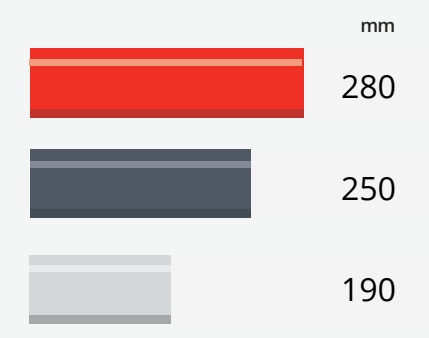

01 Adjustable Consistency

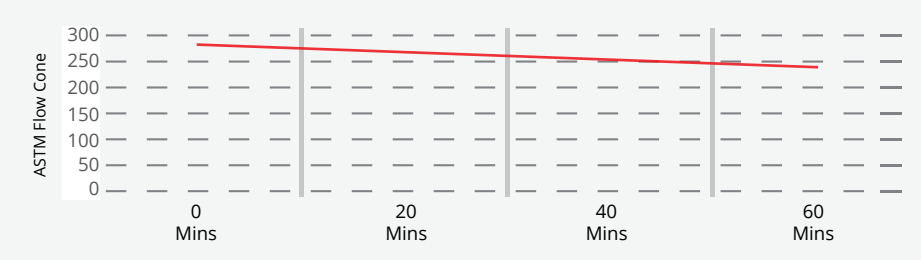

02 Compressive Strength MPa

03 ASTM Flow Data

04 Workability Retention

Conbextra Sureflow 100 is tested to ASTM C1107 standards, meeting all criteria for product performance, durability and shrinkage

Conbextra Sureflow100 has dual shrinkage compensation. This means expansion while your material sets and expansion while your materials cures. It gives you additional security that Sureflow100 supports you 100%.

Above all, it is a CONBEXTRA product, which means it has unrivalled consistency and reliability of performance. Our track record in grouting goes back for over 40 years.

Select Conbextra Sureflow100 & experience the next generation of cementitious grouts.

Fosroc offers a full range of construction chemical solutions, helping to protect structures throughout the world. Please refer to our brochures, which include:
