

## 1. External Plaster Cracks

*Description :*

*External Plaster Cracks are formed due to*

- Sand used for making the mortar is very fine
- Sand or water used for making the mortar is not clean or not free from deleterious matter.
- Poorly prepared mortar i.e. mortar is prepared on the poor surface.
- Plaster is not cured properly. i.e. no curing, use of dirty water for curing, etc.
- Poor mortar proportion i.e. less cement used.

### **Fosroc's Constructive Solution :**

**Renderoc CS** - Single component polymer modified ready to use powder crack filler

Uses & Advantages:

- Renderoc CS is used for sealing cracks on external wall plaster.
- Single component - Easy to use
- Non sagging - Can be used for horizontal, vertical and overhead applications
- Good adhesion - Effective bonding with substrate
- Non Shrink - Shrinkage cracking eliminated

Packaging: Renderoc CS is supplied in 1kg. packs.
