

Repairs & Rehabilitation of Buildings

1. *Internal Plaster Cracks*

Description

Internal Plaster Cracks are formed due to following

- Sand used for making the mortar is very fine
- Sand or water used for making the mortar is not clean or not free from deleterious matter.
- Improper Surface preparation/ inadequate pre wetting of walls prior to plastering
- Plaster is not cured properly. i.e. no curing, use of dirty water for curing, etc.
- Poor mortar proportion i.e. less cement used / more cement than required.

Fosroc's Constructive Solution :

Decofill - Single component acrylic based neutral cure seal

Uses & Advantages:

- Easy to apply and finish
- Excellent adhesion to most building materials
- Fast setting
- Non-staining
- Flexible
- Can be over painted or papered

Packaging: Decofill acrylic sealant is supplied in 0.5 kg & 1 kg packs.
