PRODUCTS

- Trafficguard UR150

THE PROJECT

Amazon IT Park were looking for a durable and aesthetically pleasing carpark deck coating system for their IT Park basement floor parking garage. We recommended Trafficguard UR150, a multilayered, polyurethane-based, decorative, high-performance deck coating system with highly flexible abrasion, impact resistance and dust-free coating, for 42,000 sq.m.

THE SOLUTION

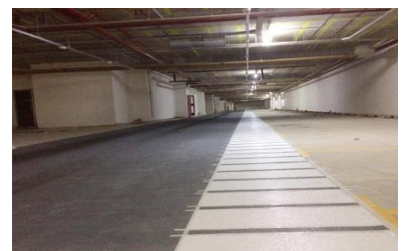

The Trafficguard UR 150 system consists of a primer, anti-slip grains, the intermediate coat and the Trafficguard wear course. The system is a pure polyurethane and UV resistant applied at 1.8 to 2.0 mm thickness. This fully cured system provides a long-lasting, hardwearing and durable floor coating to withstand continuous traffic movement.

THE BENEFITS

Concrete floors, if not over coated, generate dust, apart from damaging the joints. Trafficguard UR150 system provides an aesthetic, dust-proof, abrasion resistant high-performance coating providing long-term durability.
