THE PROJECT

Dubai Airport Freezone (DAFZA) is ideally located next to Dubai International Airport, designed to provide the most attractive investment opportunities for businesses.

Due to the growing demand from global organisations to start their business in the free zone, DAFZA required the construction of new complexes, office space and a 40,000 sqm multi-storey car park.

THE SOLUTION

DAFZA required the coating for its multi-storey car park to be strong and durable. Fosroc specified their Trafficguard UR150 for the ramps and exposed areas and Trafficguard UR250 for all indoor areas. After facing tough resistance from competitors, Fosroc solutions were approved by the consultant LACASA due to providing a complete solution right from PU based coatings to expansion joint sealants, as required for the project.

THE BENEFITS

Due to Fosroc's expert technical site support, warranty of the supplied materials and applicator Leaders Fort professional job the project was completed on time, with the client and consultant satisfied with the end results.
